

THERE'S A FINE LINE BETWEEN A REBUILT AND A REMANUFACTURED CARLYLE COMPRESSOR.

5/10,000 OF AN INCH, TO BE EXACT.

To a lot of people, a “rebuilt” and a “remanufactured” Carlyle compressor are the same thing. To Carlyle, they’re worlds apart.

That’s because a Genuine Carlyle Remanufactures Service Compressor hasn’t just been taken apart, cleaned up, and put back together. It’s been completely stripped down and remanufactured - to the point where it’s nearly impossible to tell it apart from a brand new compressor.

That means Genuine Carlyle Service Compressors are better than when they were new. Why? Because they’re not remanufactured to their original factory specifications only we have. The result is a service compressor you can count on to perform in your application.

And we guarantee it.

SOME REBUILDERS ARE PERFECTLY HAPPY TO MAKE COMPRESSORS OUT OF WHAT WE THROW AWAY.

Tear down an ordinary rebuilt compressor and you'll find a lot of old parts. Parts that are worn.

Parts that deviate from original specifications. Parts we would throw away.

Look inside a Genuine Carlyle Service

Compressor and you'll see

what we mean. All critical

wearing parts are brand

new, including the

bearings, springs, valves,

piston rings and all

suction and discharge

reeds. All electrical

components have been

upgrade to our latest design standards,

ensuring safe operation and meeting the

requirements for UL recognition. Any

machined component that is 5/10,000 of an

inch off spec has been scrapped. And

virtually every other part has

been gauged, bored,

honed, ground, polished,

tested, or replaced as

needed. Even the nameplate is brand new.

But that's only part of the story.

BUILT TO PASS THE TOUGHEST TEST OF ALL - OUR OWN.

Before you put a Genuine Carlyle Service

Compressor to the test, we put it through a

few of our own. Standard tests for every one

of our remanufactured compressors include:

- **Run-in and performance testing** -

Operating the compressor under load,

we check for proper

pump and current draw.

Oil pump reversibility and

valve leak-back rates are

also checked.

- **Pressure testing** -

The entire compressor

is pressure tested to

Underwriters Laboratories

requirements to ensure product safety.

- **Leak testing** - After at least three hours of oven

dehydration, we test for leaks at high- and low-

side design pressures. If there's a leak exceeding

1/2 ounce in five years, the entire compressor

is rejected.

- **Electrical testing** - The dielectric strength of the

motor insulation is checked at 1000 volts plus 2x

the nameplate voltage. The goal of all this

testing? To make sure that every compressor that

goes out the door is running perfectly.

YOU'RE NOT ONLY THE ONE WHO'LL RECOGNIZE THE DIFFERENCE.

The next time someone tries to sell you a rebuilt Carlyle compressor, ask them if it has earned UL recognition. If it hasn't, it isn't a Genuine Carlyle Service Compressor. Every one of our remanufactured compressors is recognized by UL. That means they've been built to comply with internationally recognized safety standards, minimizing the risk of fire, electric shock, or other safety hazards. Plus, UL's ongoing audits of our remanufacturing process ensures that each and every Genuine Carlyle Service Compressor meets their demanding standards for quality. And yours, as well.

CHOOSE THE GENUINE CARLYLE THAT'S RIGHT FOR YOU.

Carlyle's complete line of service compressors include:

- 06D, 06E, 06G and 06L semi-hermetics in capacities from 2-120 tons.

- 5F and 5H open-drive compressors rated from 5-150 tons.
- Models for air conditioning and low / medium temperature refrigeration applications.
- All popular voltages.
- Most models have unloading capability for improved part load performance.

Whichever Genuine Carlyle model you choose, you can be sure it'll perform like a new one.

Why? Because for all practical purposes, it is.

COMPARE THEN CALL CARLYLE.

Don't just take our word for it.

Ask your rebuilt compressor supplier about the parts they

use. Ask if they've earned UL recognition. Then ask yourself why you'd want anything less than a Genuine Carlyle Service Compressor as part of your equipment. Put Genuine Carlyle quality to work for you today. For the name of your nearest distributor, check out www.carlylecompressor.com on the web, or call **1-800-GO-CARLYLE** (1-800-462-2759). In Canada call 1-800-258-1123.
